

A list of bird species represented in the collections of Merseyside County Museums

Merseyside County Council
Merseyside County Museums
William Brown Street
Liverpool L3 8EN
051-207 0001

A list of bird species represented in the collections of
Merseyside County Museums

The collection of approximately 120,000 bird skins held by the Merseyside County Museums is the second largest in Britain and results from 200 years of world-wide ornithological activity. The names of many notable natural historians and explorers are associated with this material, as either collectors or donors, and it includes numerous specimens of taxonomic or historical importance.

Two major collections form the nucleus of these holdings. That of Lord Edward Smith Stanley, later 13th Earl of Derby, was bequeathed to the City of Liverpool in 1851 and provided the foundation of the present institution. Canon H.B. Tristram's first collection was purchased by the Liverpool Museum in 1896, while his second went to the Academy of Natural Sciences, Philadelphia, U.S.A. in 1906.

An account of some of the type specimens in the collection has been published by Wagstaffe (1978, Merseyside County Museums) but there are certainly many more which remain to be identified. Fisher (1981, Bull. Brit. Orn. Cl. 101 (2)) has documented the specimens of extinct or endangered species, and has prepared a catalogue of avian osteological material which is now available from the Museums.

The present list is provisional and should not be regarded as a definitive publication. It follows the sequence and nomenclature of Morony, Bock & Farrand's (1975) Reference List of the Birds of the World and identifies those species which are represented in the collection by cabinet skins (S) or mounted specimens (M). The presence of type specimens of species currently considered valid (but not of synonyms, for details of which see Wagstaffe, 1978) is also indicated (T), as is the existence of known material which may be shown by further research to be of type significance (?T).

The collection is arranged in taxonomic sequence and facilities exist for research workers wishing to examine specimens or their associated archives and documentation. Alternatively, most specimens can be sent on loan to recognised scientific institutions, although special arrangements may be necessary in the case of type material or other items of particular value.

All enquiries concerning this collection should be addressed, in the first instance, to the Director, Merseyside County Museums, William Brown Street, Liverpool L3 8EN, England.
